FICREST
INTEGRATION INC
CONTROL MEETS ELEGANCE

Elegance and Technology combine for

Sophisticated Living

Ficrest Integration is the region's technology design and installation leader for over two decades. We are an 'insider's choice' - often called on to design or fix systems that other companies can't resolve. We've completed hundreds of residential and commercial projects from Dubai to California and most points in between.

We approach every project regardless of size, with the same loyalty and focus on fulfilling every detail and delivering a solution that exceeds expectations. Whether the project is for safety and surveillance, Wi-Fi networking, smart lighting and shades, water feature controls, a media room or an outdoor music system, we have the designs, products and expertise to create our client's vision. We'll even custom build a solution if a product is not available.

In this case study, we are showcasing the scope of our solutions and services for this modern 18,000 square foot residence in Brentwood. First among the accomplishments are a dedicated Screening Room complete with a hidden cinema screen that descends when in use and fully concealed speakers. The Screening Room was designed entirely by Ficrest's team including sight lines, theater seating, lighting, and all finishing materials. Of course, we selected, installed and programmed the surround sound, movie collections and projection system.

CONTROL MEETS ELEGANCE

The Ficrest Solution

- We designed, engineered, installed and programmed a bespoke Crestron system in this Brentwood home. This smart home integrates safety, communication, environmental, audio visual and control into simple touch operations that run on mobile devices at home or anywhere the client may be in the world.
- The property includes a Ficrest Safety System with intrusion detection, keyless door and gate access, surveillance cameras, sensors and monitored security. Touchpanels and mobile devices can access the system from any location.
- A full enterprise-grade networking, Wi-Fi and communication system was installed to provide all smart devices with seamless connections and ample bandwidth in a highly secure and managed environment.
- The Environmental subsystem features Vantage lighting control that simulates activity when the home is unoccupied. A lower carbon-footprint was achieved by combining efficient LED lighting with motorized shades that respond to the position of the sun. This allows the homeowners to create just the right mood while being environmentally friendly.
- The bespoke 12-seat Screening Room matches the best commercial cinema standards with its digital laser video projector and Dolby Atmos surround sound system.
- A 24-zone music system sends independent streaming music to any area of the home. Playlists are controlled through an easy-to-use touchpanel or any smart mobile device.

Many thanks
to our project partners,

RT Abbott Construction
Vantage lighting, Cisco, Ruckus, Triad and Crestron.
