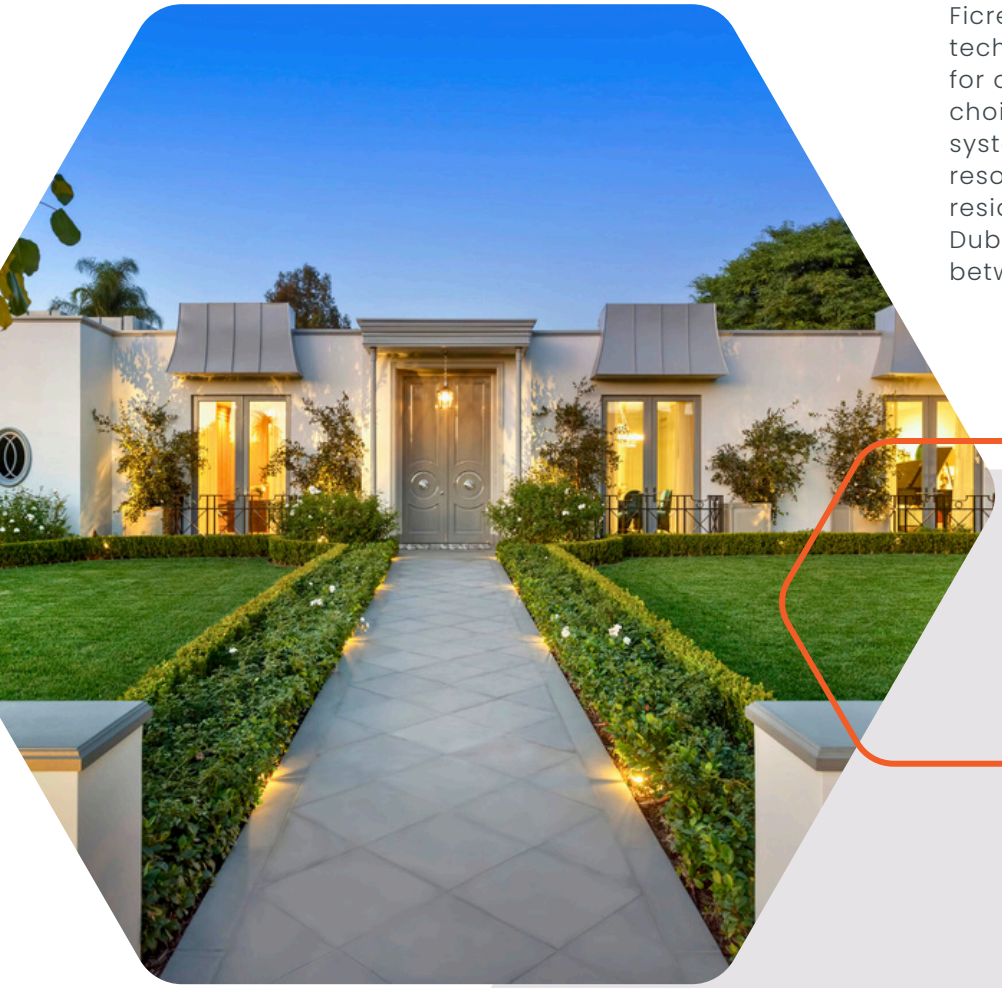
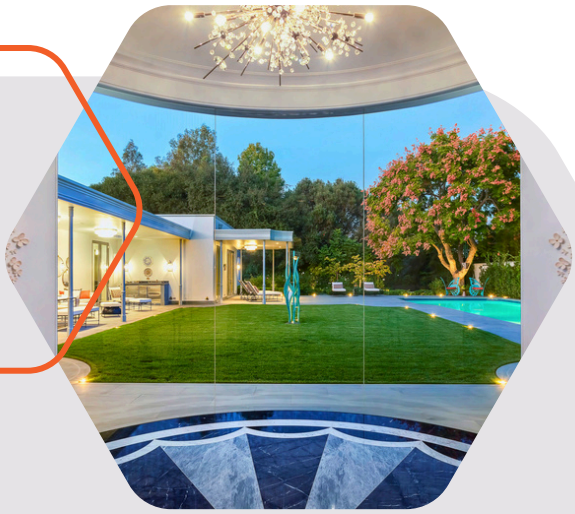
Jewel Box

where attention to detail shines



Ficrest Integration is the region's technology design and installation leader for over two decades. We are an 'insider's choice' - often called on to design or fix systems that other companies can't resolve. We've completed hundreds of residential and commercial projects from Dubai to California and most points in between.



Ficrest Integration is the region's technology design and installation leader for over two decades. We are an 'insider's choice' - often called on to design or fix systems that other companies can't resolve. We've completed hundreds of residential and commercial projects from Dubai to California and most points in between.

In this case study, we are showcasing the scope of our solutions and services for this beautiful 7,000 square foot Pasadena home. Our teams created custom solutions that focus on intricate details in conspicuous places, so no matter how many times this home is viewed, new details reveal themselves continually.

INTEGRATION INC

The Ficrest Solution

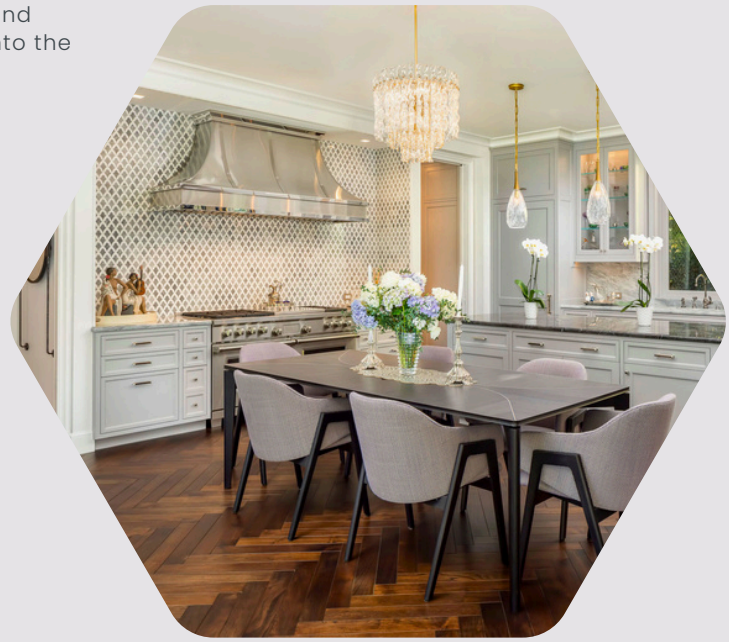
- We designed, engineered, installed and programmed a bespoke Savant system in a stunning Pasadena property to integrate safety, communication, environmental, audio visual and control into simple touch operation that run on mobile devices at home or anywhere the client may be in the world.

- This home features a Ficrest Safety System including intrusion detection, keyless door and gate access, surveillance cameras, sensors and monitored security. Touch panels and mobile devices can access the system from either location.

- A full enterprise-grade networking, Wi-Fi and communication system was installed to provide all smart devices with seamless connections and ample bandwidth in a highly secure and managed environment.

- We designed and installed a bespoke Lutron lighting system that redefines ambiance and convenience. This system seamlessly integrates with the home's architecture, offering intuitive control over lighting levels, ambiance, and energy efficiency. With simple touch operation via mobile devices, residents can effortlessly adjust lighting settings from anywhere in the world.

- We implemented a Future Automation system, seamlessly concealing TVs to preserve the home's aesthetic while offering on-demand entertainment. Crafted with meticulous detail, this system ensures that every viewing experience is immersive and seamless, blending technology seamlessly into the surroundings.



Many thanks
to our project partners,
RT Abbott Construction
Lutron, Cisco, Ruckus, Sonance,
Savant and Future Automation.
